## Svenska Rotor Maskiner International AB

### Quality and Environment Policy

SRM manufacture and develop screw compressors and similar machines for industrial applications, and through licensing, product supplies and system deliveries we increase business and customer satisfaction. We strive to exceed the expectations of our stakeholders at every interaction.

SRM target our business against the type of processes which are contributing to carbon reduction in atmosphere, and we are constantly working to improve energy efficiency of compressors as a part of our business proposal.

SRM meet and exceed the legal requirements which are valid for our local environment around our plant.

### Quality

Our customers and other stakeholders can expect;

- SRM is responsive and adopts information from all stakeholders in order to continuously improve our business
- All stakeholders shall experience that they can trust SRM as business partner, as employer and in other relations
- SRM deliver on time and according to the contract
- SRM deliver reliable products with high availability

Our employees commit to;

- Meet customer demands and other applicable conditions
- Contribute to continuously improve the business and increase the quality level of our products and services

### Environment

SRM work actively to protect the environment and prevent negative environmental impact through a life-cycle perspective by;

- Improving and streamlining our customers processes from an energy point of view
- We value environmental criteria when choosing suppliers
- We take environmental considerations regarding internal and external transports
- We minimize waste from production and laboratory

Our employees commit to;

- Fulfill valid environmental laws and regulations
- Contribute to continuously improve our environmental management system and environmental performance of our products and services
